

Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (Hardback)

Filesize: 3.9 MB

Reviews

Very beneficial to all category of folks. I really could comprehend every little thing out of this created e publication. I found out this book from my dad and i encouraged this ebook to discover.
(Maia O'Hara)

INTELLIGENT UNMANNED GROUND VEHICLES: AUTONOMOUS NAVIGATION RESEARCH AT CARNEGIE MELLON (HARDBACK)

To get **Intelligent Unmanned Ground Vehicles: Autonomous Navigation Research at Carnegie Mellon (Hardback)** eBook, remember to access the link under and download the document or have accessibility to other information that are related to INTELLIGENT UNMANNED GROUND VEHICLES: AUTONOMOUS NAVIGATION RESEARCH AT CARNEGIE MELLON (HARDBACK) book.

Kluwer Academic Publishers, United States, 1997. Hardback. Book Condition: New. 1997 ed.. 241 x 160 mm. Language: English . Brand New Book ***** Print on Demand *****.Intelligent Unmanned Ground Vehicles describes the technology developed and the results obtained by the Carnegie Mellon Robotics Institute in the course of the DARPA Unmanned Ground Vehicle (UGV) project. The goal of this work was to equip off-road vehicles with computer-controlled, unmanned driving capabilities. The book describes contributions in the area of mobility for UGVs including: tools for assembling complex autonomous mobility systems; on-road and off-road navigation; sensing techniques; and route planning algorithms. In addition to basic mobility technology, the book covers a number of integrated systems demonstrated in the field in realistic scenarios. The approaches presented in this book can be applied to a wide range of mobile robotics applications, from automated passenger cars to planetary exploration, and construction and agricultural machines. Intelligent Unmanned Ground Vehicles shows the progress that was achieved during this program, from brittle specially-built robots operating under highly constrained conditions, to groups of modified commercial vehicles operating in tough environments. One measure of progress is how much of this technology is being used in other applications. For example, much of the work in road-following, architectures and obstacle detection has been the basis for the Automated Highway Systems (AHS) prototypes currently under development. AHS will lead to commercial prototypes within a few years. The cross-country technology is also being used in the development of planetary rovers with a projected launch date within a few years. The architectural tools built under this program have been used in numerous applications, from an automated harvester to an autonomous excavator. The results reported in this work provide tools for further research development leading to practical, reliable and economical mobile robots.
