Metacognition in the Rationality Debate

By Kleitman Sabina

VDM Verlag Sep 2008, 2008. Taschenbuch. Book Condition: Neu. 222x151x15 mm. Neuware - Effective decision-making relies on both feeling confident about the decision and realistically assessing its accuracy. This book presents the results of several large-scale studies of test-taking situations in which people stated their level of confidence in their answers. These judgments were internally stable and habitual across different typical and novel cognitive domains. Self-perception of the competency of the fundamental cognitive abilities predicted confidence levels; these levels were compared with the actual results, indexing the quality of Self-monitoring processes. Errors in confidence ratings were consistent, habitual, and linked with particular heuristic modes of thinking; these errors reflected the irrationality that plagues metacognitive processes. By determining the status of confidence judgments and their calibration within the cognitive/metacognitive taxonomy and their psychological determinates, this book demonstrates that both phenomena reside at the metacognitive/rational level. This book will be valuable to psychology and education professionals, and to anyone interested in understanding decision-making processes and their underlying intrapersonal factors. 180 pp. Englisch.

Reviews

These kinds of publication is everything and made me hunting ahead of time and more. I have got read through and i also am confident that i am going to gonna study yet again yet again later on. Its been printed in an extremely basic way in fact it is only after i finished reading this pdf in which in fact transformed me, alter the way i believe.

-- **Cristina Koepp**

The book is fantastic and great. It normally will not cost an excessive amount of. I am just easily could possibly get a satisfaction of reading a published ebook.
